

Company: CleanEnergy Corp.

Founders: John Doe, Jane Smith.

Leadership experience: Founders have 15 years of industry experience.

Domain expertise: Core competency in hydrogen fuel cells and clean technology.

Commitment: The team is committed full-time.

Product: Modular hydrogen fuel cells for backup industrial power.

Problem: Industrial power grid outages cost billions.

Value proposition: Provides clean, 99.999% reliable backup power.

Customers: Grid utility companies and datacenter operators.

Business model: Hardware sales plus annual maintenance contracts.

Market: Clean energy storage and backup power market.

Market size: Total addressable market is \$12 Billion globally.

Competitors: Legacy diesel generators and hydrogen battery rivals.

Competition analysis: Hydrogen fuel cells are 50% more efficient than rivals.

Revenue model: High margin hardware sales.

Funding received: Raised \$2.5 Million in seed funding.

Current revenue: Revenue is \$0.0 ARR.

Financial metrics: High gross margins expected.

Technology description: Proprietary hydrogen fuel cell stack.

TRL level: TRL 6 readiness level validated in pilot.

IP status: Two patents filed for cell stack design.

Risks: Market adoption risk, regulatory certification risk, supply chain risk.
